

PLAYFAIR CIPHER

Introduction

Playfair Cipher is a classical encryption method that encrypts letters in pairs. It is more secure than simple substitution because it hides letter patterns.

Concept

- Uses 5x5 matrix
- Works on letter pairs
- I and J are combined
- Uses position rules for encryption

Steps

1. Choose a keyword
2. Create matrix
3. Split message into pairs
4. Apply rules
5. Get ciphertext

Example

HELLO → HE LX LO

Encrypted output depends on matrix
